ABOUT US

Built from execution. Positioned for industry. Cidermac Properties has developed its foundation through practical involvement in architectural projects, combining design, coordination, and on-site execution. The work reflects a disciplined approach to delivery, with an emphasis on structure, clarity, and accountability across project stages.

Building on this experience, Cidermac Mining SARL represents a deliberate expansion into mining and manufacturing. The transition is not a shift away from existing capability, but a progression into more complex, system-driven environments. This profile outlines that progression—from built environment experience to industrial capability—forming a structured basis for entry into resource-based operations.

This profile presents that evolution — from experience in the built environment to industrial capabilities — constituting a structured foundation for entry into resource-based operations.

WELCOME MESSAGE

Cidermac is built on **disciplined execution** and **practical delivery**, shaped by hands-on experience in the built environment.

This foundation has established a **structured approach** to **coordination**, **accountability**, and **consistency** across all stages of work.

The formation of Cidermac Mining SARL marks a deliberate expansion into **mining and manufacturing**, grounded in proven capability and **operational clarity**.

Rather than pursuing rapid growth, the focus remains on developing a **stable, scalable operation** supported by strong systems, technical understanding, and control.

With a clear direction and disciplined approach, the company is positioned to deliver **reliable performance** and **long-term value** within the mining and resource sector.

BUILT ENVIRONMENT

FACILITIES THAT INSPIRE

Functional. Sustainable. Future-ready.

DESIGNING SPACES THAT LAST

Quality construction with attention to detail.

We take a practical approach to project execution, combining design development with on-site coordination and structured delivery processes.

Our work includes architectural planning, documentation, and involvement in construction activities, with a focus on maintaining clarity, control, and accountability throughout project stages.

INDUSTRIAL CAPABILITY

ENGINEERED FOR PERFORMANCE

Systems and infrastructure designed to operate reliably in demanding environments.

BUILT ON EXPERIENCE

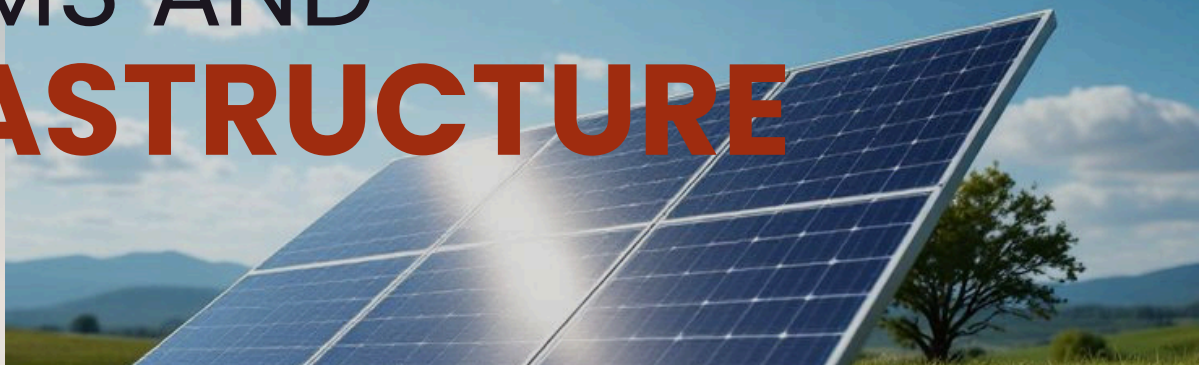

Proven capability in executing complex industrial projects across multiple sectors.

FOCUSED ON RESULTS

Delivering safe, efficient, and sustainable solutions that drive long-term value.

SYSTEMS AND **INFRASTRUCTURE**

INDUSTRIAL OPERATIONS

Mining operations rely on heavy equipment and controlled site activity.

These systems support drilling, movement, and preparation of materials within operational environments.

GENERAL SUPPLIES

HEALTH, SAFETY AND ENVIRONMENTAL RESPONSIBILITY

Cidermac operates with a strong focus on safety, responsibility, and disciplined execution across project environments. Health and safety are treated as a core part of operations, supported by clear procedures, site awareness, and practical risk control. Environmental and social considerations are also recognized as part of responsible project delivery.

This approach is reinforced through structured supervision, routine inspections, and clear accountability at every stage of execution. Site activities are continuously monitored to ensure compliance with safety standards, operational procedures, and project requirements, reducing risk while maintaining consistency in delivery.
